

## How is LYRICA believed to work? [1]

### Answer:

Spinal cord injury can damage nerves. This damage causes burning, stabbing, throbbing, sharp, and electric shock–like pain. LYRICA is believed to work on these damaged nerves. It is unknown exactly how LYRICA works in the body. Animal studies suggest that LYRICA reduces “extra” electrical signals sent out by these damaged nerves. The meaning of these studies in humans is not known.
